Minimum System Requirements
LC II, 16Mhz 68030 (Power PC is ideal)
5 MB of available RAM
2 MB of hard disk space for QuickTime
2.5 MB hard disk space for The Digital Frog application
CD-ROM drive
System 7.1, or later
Screen capable of displaying 640 x 480, 256 colors

Installation
The Digital Frog requires QuickTime. We also recommend that you copy The Digital Frog application from the CD to the hard drive. (You can run it directly from the CD, but it will run more slowly.)

If QuickTime 2.x or later is not already installed:
1. Insert the disc into the CD-ROM drive.
2. Double click on the Digital Frog CD-ROM icon to view the contents of the CD.
3. Double click on **Drag contents to System Folder**.
4. Drag the indicated files to the System folder.

To install The Digital Frog:
1. Drag **The Digital Frog** icon from the CD to the hard drive.
2. Double click on the copied **The Digital Frog** icon to run the program.

Troubleshooting
If the Mac has less than 8 MB of RAM, you may need to turn off unnecessary extensions and reduce the application size to 5000 K. If you get message **Could not find QuickTimeLib** when you launch the program, you may be low on memory; reducing the application size will help.

To reduce the application size:
1. Click on **The Digital Frog** icon to select it.
2. Choose **Get Info** from the **File** menu.
3. Change the **Preferred Size** to 5000 K.
